Physical features of Nepal

In your books, answer these questions:

- What physical features are the same in Telford and Nepal?
- What physical features are different in Telford and Nepal?

What wild weather do these places have?

Why?

How do the physical features cause these?

Plenary

How are physical features, like Mount Everest, made?

The Himalayas formed when two tectonic plates, the Indian Plate and Eurasian Plate collided with one another. The rock on the seabed was pushed upwards, forming the mountains that can be seen today.

Draw a diagram with labels about what just happened.
